ASPARAGUS

WASHINGTON. This is the best known variety. It is a strong grower, producing stocks of large size and of finest quality. The fact that it is rust-resistant makes it the ideal Asparagus for all. Our plants, produced on heavy soil, are superior to the little seedlings grown in sand. Every plant is graded and are large, fleshy roots that, with proper care, will be ready to cut the second year. Our freshly dug plants will grow much better than those which are shipped in. Set 100 plants for a family of four. **Strong plants: 25 for \$1.75; 50 for \$2.75; 100 for \$4.50.**

Ask for prices on larger quantities.

CURRENTS

RED LAKE. By far the most productive of the many kinds we have tested. Color a brilliant red; large berries borne in long clusters along the stems; quality excellent. The white varieties have proved worthless in this climate. **Price: Each 50c; 3 for \$1.35; 10 for \$4.00.**

We grow and sell the kinds which do best in Kentucky. Use Hillenmeyer's Tried and Tested Plants. All varieties listed are perfect flowering.

BLAKEMORE

Ripens a few days before Premier. Berries light red, conical and will remain firm a few days after ripening. Excellent for commercial or home use. Productive, good plant maker, and does well on rather poor soil. Our plants are the yellows-free strain.

DIXIELAND

This is a new berry ripening early, about with Blakemore. Plants are vigorous, fruit slightly tart, but quite firm and a good shipping berry. Light, attractive color that holds well after ripening. We are offering at same price as other plants, although it is selling at a premium in some places.

POCAHONTAS

A promising new midseason berry. Released by U.S.D.A. Good production reports in the East, and favorable reports of plantings in Kentucky. Vigorous grower, large, firm berries, vivid red, a little darker than Blakemore. Excellent for shipping and freezing.

PREMIER

One of the most popular Strawberries ever introduced. Good plant maker, frost resistant and prolific. The bright red berries are large, bluntly conical, of good quality and hold up in size to the very end if the season is favorable. The leading berry for market or home. No variety ever tested has been so deservedly popular and we recommend it as the best early and midseason kind.

TENNESSEE BEAUTY

This is the outstanding introduction of the University of Tennessee from its Strawberry breeding experiments. The berries are large, bluntly conical or wedge-shaped. They are an attractive glossy color, of good quality, and are borne on semi-erect stems. The large bright green calyx gives the berries an attractive setting. Vigorous, and a medium plant maker, but productive. Outstanding for home canning and market.

EVERBEARING VARIETY—VIRUS FREE

GEM. We have tried several varieties and found this to be the most productive and best so far under Central Kentucky conditions. For years we have referred to the everbearing varieties as "never bearer." However, a new method of culture has proven successful, provided you can water the plants during the summer months. If you do not have water available, we suggest you forget the everbearing varieties and plant varieties listed above.

PRICES ON GEM	50 plants	\$2.25
	100 plants	4.00
	200 plants	7.60

On our own grounds we have conducted experiments as outlined by the University of Kentucky, Department of Horticulture, and suggest the following cultural directions:

1. Prepare your ground early if possible.
2. Set plants one foot apart each direction in beds, four rows wide. Leave two-foot walk between beds.
3. Cultivate for one month after planting. Then mulch with 1 to 1½ inches of sawdust, shavings, or peat moss, but do not cover the plants!
4. Pick the blossoms until July 1st, then let them develop. THE RUNNERS SHOULD BE REMOVED DURING THE ENTIRE SEASON.
5. Water as needed, and pick the berries about every third or fourth day.
6. Hand weed as needed, but do not disturb the mulch. Requirements—about 200 plants for the average size family.

CULTURAL DIRECTIONS for STRAWBERRIES

Except Everbearers

WHEN PLANTS ARE RECEIVED. Plant at once if possible. If season is not favorable put in cool, moist place, BUT DO NOT WATER UNTIL PLANTED. They also may be unpacked and trenched in open ground.

WHEN TO PLANT. Late in March or April is the chosen time. Fall planting usually results in a complete failure.

SOIL. Strawberries respond to good soil and you should choose a fertile location. However, do not plant within one year after turning under sod as white grubs invariably cause trouble. Prepare the ground very thoroughly.

DISTANCE TO PLANT. The rows should be three and a half to four feet apart and the plants set about eighteen inches in the row. It requires about 7000 plants per acre.

CULTIVATION. During the summer keep the ground constantly stirred and free of weeds. Moisture preservation by dust mulch will conserve the vitality of your plants and produce a fine matted row. Keep hoe and cultivator busy.

MULCHING. Protect by mulching with clean straw in fall or early winter after the ground is frozen. Do not apply too heavily as this smothers the plants. Leave on during the fruiting season as it conserves moisture and keeps the berries clean.

AFTER FRUITING. Immediately plow or narrow the original row to about 12 to 15 inches. Thoroughly cultivate the middle so as to give the new plants a chance to get established. Repeat the second year. We do not advise keeping beds more than two or three years.

FAMILY REQUIREMENTS. About three hundred, five hundred, or a thousand plants are required for a small, medium or large family.

SELECTION OF VARIETIES. We shall be glad to make selections of suitable varieties if you want to leave this to us.

Here in the heart of the famed Blue Grass Section of Kentucky, the best seed in the world is produced. We are pleased, however, to offer something NEW in the way of lawn seed—CULTIVATED BLUE GRASS SEED.
